

Frog investigation

Whilst frogs have many observable features in common, each species can be quite diverse. They can live in various habitats, move in different ways, have unique reproductive cycles, and have their own distinctive call.

Research a frog local to your area:

What are the **specific survival needs** and **distinguishing features** of this species of frog?

I am researching the

| Food | Water |
| Shelter | Oxygen |
| Place to raise their young | Distinguishing features and call |

Who can help?

- Your local Landcare group and other community environmental groups
- Local Indigenous Elders
- Local council and park rangers

Online Resources:

- There are frog groups in many states and territories of Australia, see: <http://frogs.org.au/groups/>
- The Amphibian Research Centre's Frogs of Australia - Select your location on a map of Australia and the site will show you what frogs are found in your region. <https://www.frogs.org.au/frogs/>
- The Australian Museum has an app to help you ID frogs whilst also allowing you to become a citizen scientist and contribute to valuable frog research. <https://australianmuseum.net.au/get-involved/citizen-science/frogid/>
