

Creating your own potato chips: growing

Production timeline:

Growing potatoes takes approximately 4 months.

Use the timeline below to record the dates of your production process. Before you plant the potatoes, you will need to prepare and fertilise the soil. You will need to make sure your plants are watered regularly, they will need more water in dry weather.

Creating your own potato chips: growing

Start: Prepare your soil.

How are you preparing the soil?

Sow: When will you sow your crop?

Record your start date:

What conditions are likely to occur in your area over the next 4 months?

Monitor:

What will you look for to know that the potatoes are healthy?

Inputs:

What will you need to add to help them grow?

Harvest:

Assuming that your potatoes take 4 months to mature, when do you anticipate you will be able to harvest? How do you know they will be ready to harvest?
