

POLLINATOR – WHO AM I?

Suyin loves exploring her outdoor surroundings and discovering what pollinators call it home. Pollinators are a vital part of the biodiversity we rely on to survive. Without pollination, many crop plants would not be able to produce the fruit, vegetables, nuts, seeds and oils that make up the food that we eat. But it's not just bees that help with pollination. Did you know there are lots more pollinators that help drive biodiversity?

INSTRUCTIONS

Try to identify the pollinator by the clue. Can you match them all?

Check your answers.

How did you do?

After playing the pollinator game, go outside and take a magnifying glass (or just your eyes). See what pollinators you can find.

1. I am warm blooded.
2. I am a nocturnal pollinator.
3. I often have brightly coloured wings.
4. I like to chirp and fly in the air.
5. I am small but mighty.
6. I am one of the best known pollinators.
7. You like to shoo me away.
8. I am attracted to bright light.
9. I am sleeker and have a narrower waist than a bee.

Wasp

Possum

Butterfly

Cockatoo

Bee

Fly

Moth

Ant

Flying fox

1. Possum 2. Flying fox 3. Butterfly 4. Cockatoo
5. Ant 6. Bee 7. Fly 8. Moth 9. Wasp

The answers are above if you need some help.
